

Creating a Signature in Adobe

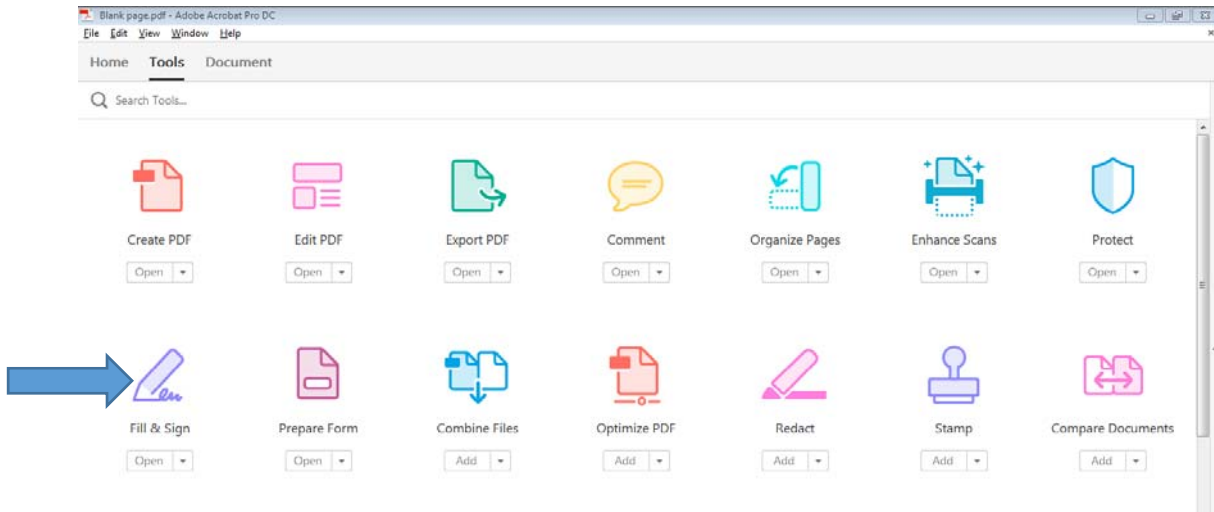

Select the "Fill and Sign" icon in the menu on the right.

If that isn't showing you can also:
Click on the "Tools" button in the menu bar.

Select the "Fill and Sign" icon.

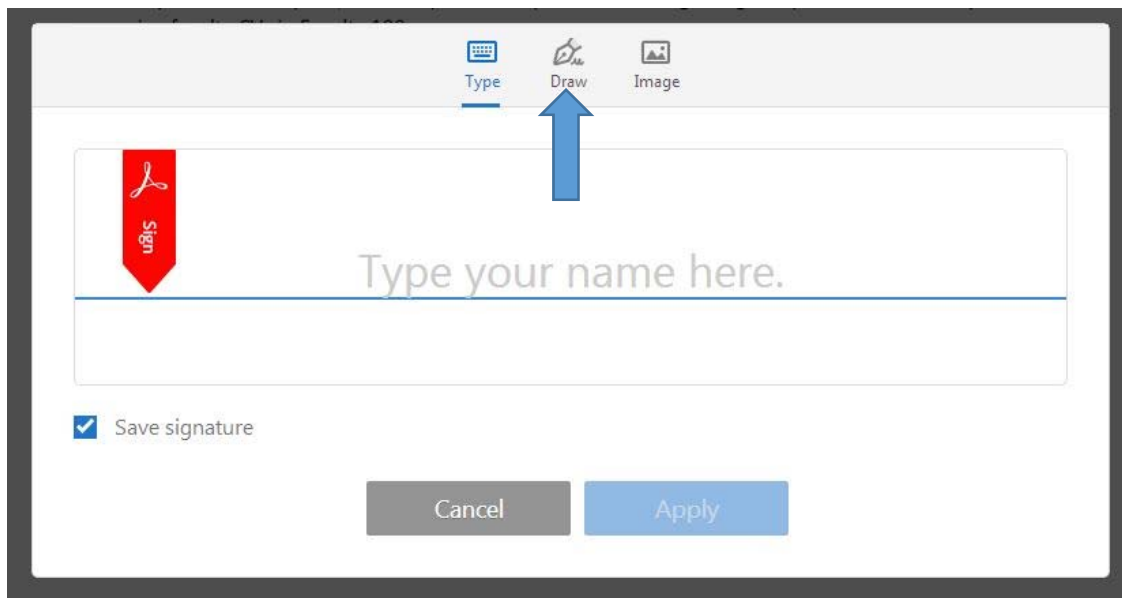

Select the "Sign" icon. In the menu, select "Add Signature."

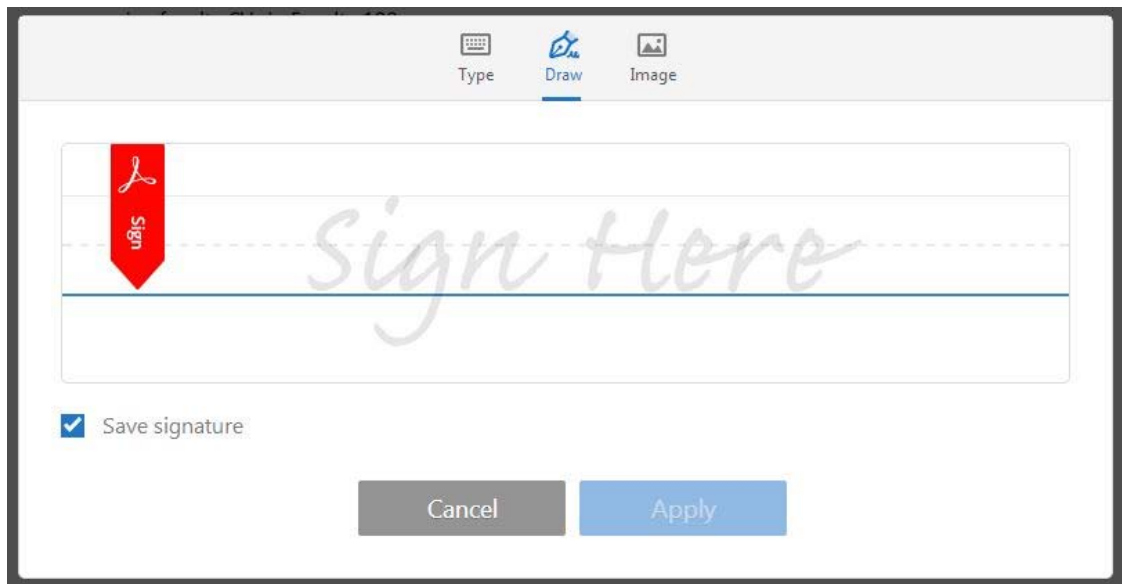

Select the "Draw" icon.

(Don't type your name as that will only put your name in a signature font which is not a valid form of digital signature. Also don't select "Image" as a picture of your signature also isn't a valid form.)

Create your signature with your mouse in the box. You can select Cancel to redo it, and Apply to save it.

Once your signature is saved, you can access it in the “Fill and Sign” tool. Click on the “Sign” button and your signature will appear. Click on your signature, then drag and drop it to where you want to place your signature.

Your signature will have a shrink font and an enlarge font button to change the size of it, and a delete button to remove it. Once you save the document, your signature is permanently placed there.
